Aluminium Extruded Profiles

Vimetco Extrusion

Vimetco Extrusion is a subsidiary of Alro SA. Located in Slatina, Romania with a stone's throw from the Alro cast house, Vimetco Extrusion benefits from a secure supply of Primary Aluminium extrusion billets of the highest quality.

Vimetco Extrusion was established in 2006, as a separate entity, on the same site of Alro's rolling mill. Two modernized UBE presses are currently in operation. One press of 2,250 metric tonnes with 8" container and the second of 3,600 metric tonnes with 11" container. Two more presses will be refurbished in the near future. A Farrel press of 1,650 mt with 6" container will start to operate before the end of 2008 and a Sutton press with 5,000 mt and a 13" container will be operational by mid 2009.

Our management team comprises top industry professionals from several countries with many years of experience in Aluminium Extrusion. We are constantly implementing innovations and improvements to better serve our customers' needs. With our commitment to perfection we strive to fulfill all our clients' requirements regarding quality, delivery and service.

Technical capabilities

Alloys	6005, 6060, 6063A, 6082
Tempers	T4, T5, T6, T66
Maximum Ø	300 mm (from 2009 up to 400 mm)
Standards	EN 755, EN 12020
Length	standard 6,000mm
Subject to special approval	shorter and /or up to 12,000mm length

Standard and special extrusions according to customers' specifications.
